

Mastco's Multi-Reaction Kit

Introducing the Mastco Multi-Reaction Kit developed to increase productivity without breaking your budget. The kit features the well engineered Gibson PTFE Multi-Reaction Plate which allows the bench chemist to simultaneously run six reactions under identical conditions using standard heating and cooling equipment found in every lab. No additional specialized device or equipment is needed. The alignment of the tubes assures equal magnetic stirring, something standard reactor blocks can't offer. The reaction tubes and stir bar magnets used with the plate are included and are the perfect size for small-scale reactions. Each tubes' ground glass joint allows full integration with standard lab glassware, such as reflux condensers and vacuum adapters. Designed by a chemist for chemists looking for increased productivity!

Part Number: MRP2000KIT

Price Each: \$165.00

Replacement tubes and spin bars may also be purchased from Mastco

Multi-Reaction Kit Includes:

- One PTFE Reaction Plate
- Six 50mm reaction tubes with 14/20 ground glass joints, and six 10mm x 5mm oval PTFE encapsulated stirrer bar magnets.

Multi-Reaction Kit Features:

- PTFE Reaction Plate: Chemically inert, light, easily to clean, no corrosion
- Six reactions with one clamp all stirring equally.
- The reaction tubes have standard 14/20 ground glass joints and are reusable – no wasting test tubes..
- Adapts to standard cooling baths and heating baths unlike reactor blocks. No special equipment needed.
- Reaction tubes are easy to manipulate and clean, perfect size for small-scale reactions of 1 to 500 mg.
- You can see what's going on in your reactions without disturbing the tube, or sticking your head in the hood!
